BURROW'S™
COMPLETE POST-FRAME SOLUTIONS

Featured product: RICHLAND™ LAMINATED COLUMNS

RICHLAND™ GLULAM COLUMNS

with Green Post™ protection

Extend the life of post-frame foundations — and the buildings they support — with polyethylene-wrapped columns. Green Post™ poly-wrap is a factory-applied two-step process that provides a formidable barrier to wood decay and termites. It's available as an add-on for all Richland™ Glulam and Nail-Lam columns up to 9" x 9" dimensions.

ENHANCED PROTECTION AGAINST ROT AND TERMITES

With Green Post™ protective wrap, bitumen is applied to the vulnerable lower portion of the column, then a heavy-duty polyethylene wrap is heat-shrunk tightly around the wood. The result: a protected, installation-ready column — no loose sleeve, no field-fitting, no separate protector to handle.

- **Third-party tested, ICC-ES-certified**
- **Backed by a 20-year limited warranty**
- **Integrated notched ends maximize uplift restraint**

WHY CONTRACTORS CHOOSE GREEN POST™

1. **Factory Applied**
   Installed under controlled factory conditions. Not left to proper sleeve installation at the jobsite.
2. **Tight-Fitting Moisture Barrier**
   Polyethylene heat-shrunk against the column, activates the bitumen, bonding it to the wood.
3. **Less Trapped Water**
   Fits tightly to the column, reducing the void where water and debris collect around an oversized sleeve.
4. **Faster Installation**
   Arrives ready to set. No sliding on, trimming, drilling, lubricating, aligning, or fastening.
5. **Built-In Uplift Restraint**
   An uplift restraint to improve anchorage when the column is embedded in concrete.
6. **Easier Handling and Delivery**
   No bulky loose sleeves to haul, unload, protect from deformation, or match to columns.
7. **Premium Laminated Column**
   Applied onto Richland™ laminated columns. Straightness, consistency, strength, and connection flexibility.

BURROW'S™
COMPLETE POST-FRAME SOLUTIONS

Featured product: RICHLAND™ LAMINATED COLUMNS

SIDE BY SIDE

RECOMMENDED RICHLAND™ GLULAM + GREEN POST™	SEPARATE POST PROTECTOR™
Factory applied	Installed at the jobsite
Heat-shrunk tightly to the column	Slides over the outside of the column
Bitumen plus polyethylene protection	HDPE barrier sleeve
Arrives ready to set	Requires additional installation steps
Uplift restraint built into the system	Sleeve must be mechanically secured
No loose protector to ship or store	Separate parts must be handled and matched
Clean, integrated appearance	Bulkier add-on component
One complete column solution	Post and protector purchased separately

FAR LESS HASSLE

For a relatively small difference in material cost, the contractor receives:

- **A premium laminated column**
- **Factory-applied ground protection**
- **Built-in uplift restraint**
- **Reduced jobsite labor**
- **Fewer loose components**
- **A cleaner, more professional foundation system**

THE BETTER QUESTION

Instead of asking:

"Which protector should I put on my post?"

Ask:

"Why not buy a premium column with the protection already built in?"

Protect your reputation and add Green Post™ to your next Burrow's package.

Talk with your Burrow's rep about pricing, project requirements, and proper sizing.
